WINDSOR

EXAMINING THE HUMAN HEART

MATTHEW HALLGREN, a sixth-grader at Sage Park Middle School in Windsor, uses a stylus and 3-D glasses to examine a human heart on a virtual reality device while visiting the zSpace mobile lab at the school May 3. zSpace is a three-dimensional, virtual reality platform that allows students to interact with content in an innovative way. The mobile lab is equipped with a dozen devices that help students and teachers explore a wide range of lessons. Katie Post, the school's science, technology, engineering and mathematics coach, was instrumental in bringing the zSpace lab to the school. "I almost forgot there was a screen there," Matthew said. "I like that you can move everything with a stylus."
